Executive Overview

The domain hackthebox.com is a well-established and reputable domain with proper DNS configurations, valid SSL/TLS certificates, and no malicious detections in threat intelligence sources. However, some minor concerns related to email security and URL reputation were identified that warrant attention to maintain security posture.

Target Overview

Property	Value
Target	hackthebox.com
Root Domain	hackthebox.com
Assessment Type	url

Security Findings

Domain Registration

LOW

EVIDENCE

Domain hackthebox.com is registered with Amazon Registrar, Inc. since 2010-03-18 and is set to expire in 2027-03-18. The domain status is clientTransferProhibited.

IMPACT

The domain is stable and protected against unauthorized transfers, reducing risk of domain hijacking.

DNS Configuration

LOW

EVIDENCE

DNS records show two A records (109.176.239.69, 109.176.239.70), MX records pointing to Google mail servers, and DNSSEC is enabled with signed delegation.

IMPACT

Proper DNS configuration and DNSSEC reduce risk of DNS spoofing and improve domain trustworthiness.

SSL/TLS Certificate

LOW

EVIDENCE

The SSL certificate for hackthebox.com is valid until 2026-10-08, issued by Google Trust Services, uses strong signature algorithm (ECDSA with secp256r1), and supports server authentication.

IMPACT

Valid and strong SSL/TLS certificates ensure secure encrypted communications and protect against man-in-the-middle attacks.

Threat Intelligence

LOW

EVIDENCE

VirusTotal and other threat intelligence sources report no malicious or suspicious detections for hackthebox.com. Last analysis shows 0 malicious and 0 suspicious votes.

IMPACT

The domain is not currently associated with malicious activities, reducing risk of compromise or reputation damage.

Email Security

MEDIUM

EVIDENCE

The domain's SPF record is 'v=spf1 include:_u.hackthebox.com._spf.smart.ondmarc.com ~all' which uses a soft fail (~all) mechanism.

IMPACT

Soft fail SPF may allow some spoofed emails to pass SPF checks, increasing risk of phishing or spoofing attacks targeting the domain.

URL Reputation

MEDIUM

EVIDENCE

URLScan.io data shows multiple subdomains and URLs related to hackthebox.com with high traffic and legitimate content. However, some URLs (e.g., hacktheboxltd.sjv.io) redirect off-domain and may be used in affiliate or tracking campaigns.

IMPACT

Off-domain redirects and affiliate links may be abused by attackers for phishing or malware distribution if not properly monitored.

Remediation Recommendations

- Update SPF record to use a hard fail (-all) instead of soft fail (~all) to improve email spoofing protection.
- Continuously monitor URLs and subdomains for suspicious redirects or phishing attempts.

- Maintain regular renewal and strong configuration of SSL/TLS certificates.
- Ensure DNSSEC is fully deployed and monitored for integrity.
- Keep domain registration details up to date and monitor for unauthorized changes.

Correlation Notes

The domain's DNS configuration, SSL/TLS certificate, and threat intelligence data collectively indicate a legitimate and secure domain. The email security finding correlates with the SPF record configuration, suggesting a potential vector for spoofing. URL reputation findings highlight the need to monitor external redirects related to the domain to prevent abuse.
